Subject: more info on Crosby Fire
Date: Tuesday, April 2, 2019 2:19:00 PM

According to news sources, the fire started around 10:30 CDT. KMCO is a specialty chemical manufacturer that produces custom chemical blends for various customers. Their Risk Management Plan (RMP) indicates they have several RMP regulated substances, some flammables and toxics including ethyl chloride, ethylene oxide, sulfur dioxide, formaldehyde, ammonia, propylene oxide, and isobutylene (2-methylpropene). News reports are saying that isobutylene started the explosion/fire, and that employees had difficulty evacuating because exit gates were locked. The media is also reporting two injuries and one death. Four schools in the area have been locked down and established shelter in place. Highway 90 has been shut down in both directions.
